

Continuous Motion Tray Packer

Our ARPAC Brand TrayStar Model high-speed, continuous motion tray packer makes automatic tray loading a variety of products, such as bottles, cans, cartons, jars, fast and easy.

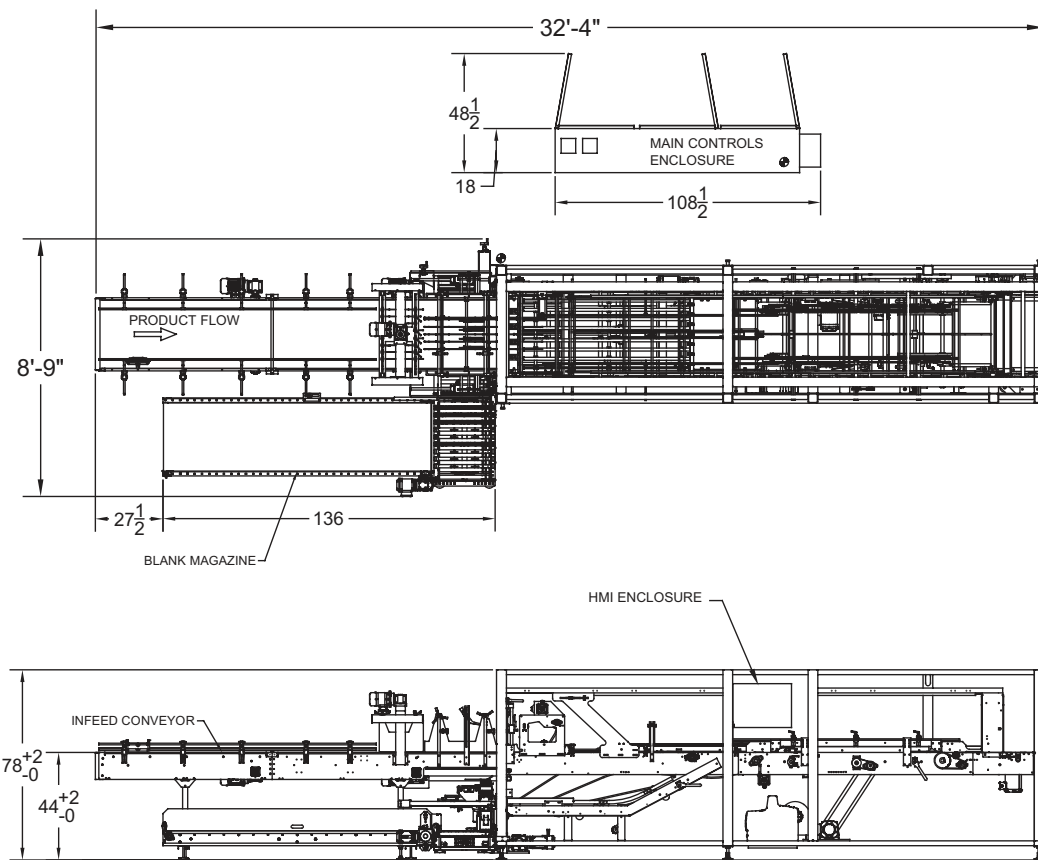

The TrayStar tray packer automatically loads product into a wraparound tray at speeds of up to 60 trays per minute. Wraparound trays ensure that the product is enclosed in a tightly fit tray, preventing scuffing and product damage. The machine features gentle product handling and loading to keep your product looking pristine.

Our rapid changeover design with color-coded lane spacing guides, user-friendly touchscreen controls, and servo controlled collators, allows line operators to switch to a different product size quickly and efficiently.

APPLICATIONS

- Automotive
- Beverage
- Building Supplies
- Consumer Goods
- Contract Packaging
- Food
- Health & Beauty
- Material Handling
- Printing & Publishing

Final layout may vary.
